

Marquette (MI) • 19–23 July 2010

XXVIII International Conference on
Biomechanics in Sports

POLITECNICO
DI MILANO

 **Ezio Preatoni^o**

① Dipartimento INDACO, Politecnico di Milano, Milan, Italy

**MOTOR VARIABILITY and SKILLS
MONITORING in SPORTS**

Motor Variability and Skills Monitoring in Sports

MV and ISBS

DYSON AWARDS

- ★ Bartlett, R. (2005). *Future trends in sports biomechanics – reducing injury risk or improving performance? XXIII ISBS. Beijing, China.*
- ★ Hamill, J. et al. (2006). *Overuse injuries in running: do complex analysis help our understanding? XXIV ISBS. Salzburg, Austria.*

KEYNOTE LECTURES

- ★ Bartlett, R. (2004). *Is movement variability important for sports biomechanics? XXII ISBS. Ottawa, Canada. .*
- ★ Hamill, J. et al. (2005). *Using coordination measures for movement analysis. XXIII ISBS. Beijing, China.*
- ★ Wilson, C. (2009). *Approaches for optimising jumping performance. XXVII ISBS. Limerick, Ireland.*

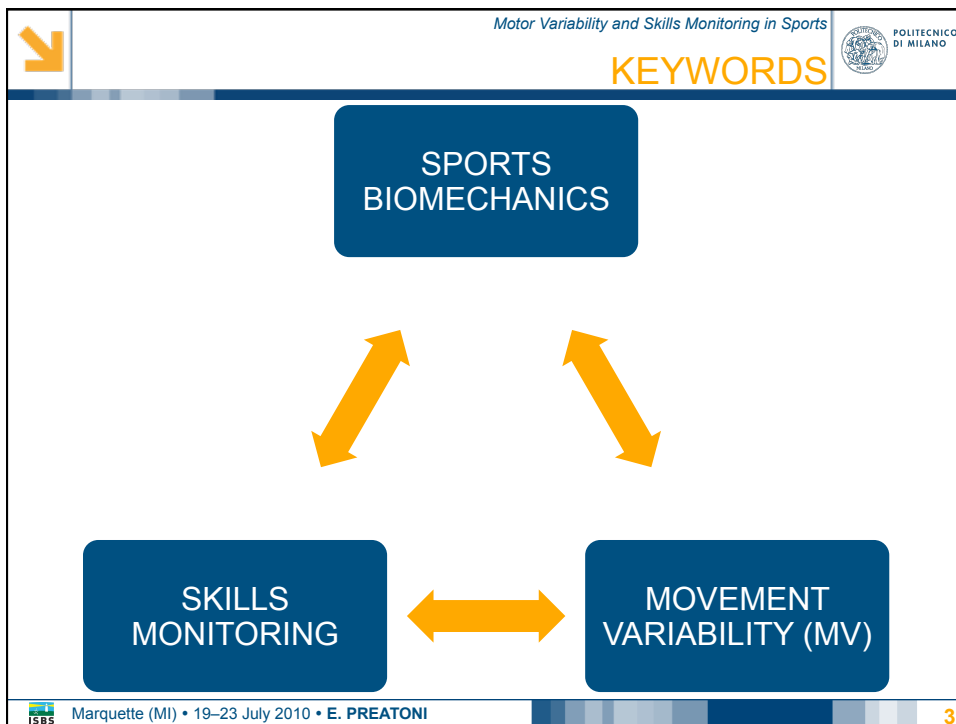

APPLIED SESSION

- ★ (2009). *Data analysis techniques. XXVII ISBS. Limerick, Ireland*

Marquette (MI) • 19–23 July 2010 • E. PREATONI

2

Motor Variability and Skills Monitoring in Sports

SPORTS BIOMECHANICS

★ distinctive peculiarities, need for specific approach

CLINICS

SPORTS

- ★ “turning a pathological state into a physiological one”
- ★ average behaviour

- ★ no “average subject”
- ★ exalting individual potentialities (performance & technique)
- ★ maximal biomechanical demands
- ★ granting wellness & preventing injuries
- ★ details may be fundamental

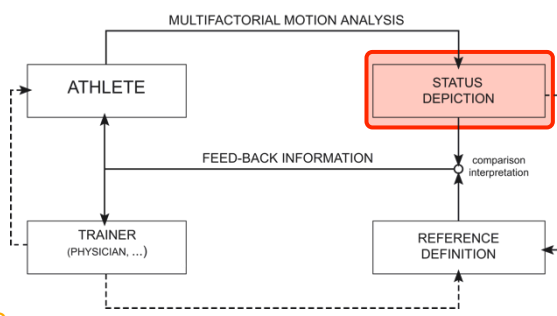

1585 Marquette (MI) • 19–23 July 2010 • E. PREATONI 4

Motor Variability and Skills Monitoring in Sports

SKILLS MONITORING 

MOTOR SKILL

The ability of obtaining the desired goal with a high degree of certainty and maximum proficiency. *[Schmidt & Lee, 2004; Newell K.M. and Ranganathan R., 2009]*

MAIN ISSUES

- ★ **ROBUST DESCRIPTION** (variability, exp.design, data reduction, ...)

[Preatoni, 2007; Preatoni et al., in press]

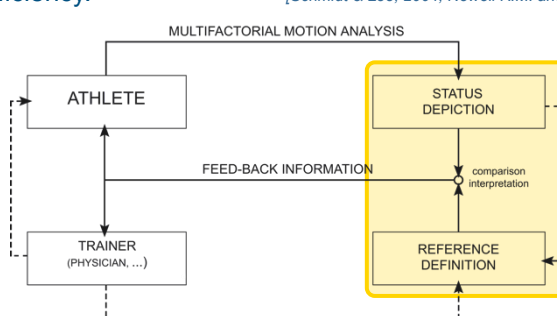

1585 Marquette (MI) • 19–23 July 2010 • E. PREATONI 5

Motor Variability and Skills Monitoring in Sports

SKILLS MONITORING 

MOTOR SKILL

The ability of obtaining the desired goal with a high degree of certainty and maximum proficiency. *[Schmidt & Lee, 2004; Newell K.M. and Ranganathan R., 2009]*

MAIN ISSUES

- ★ **ROBUST DESCRIPTION** (variability, exp.design, data reduction, ...)
- ★ **REFERENCE DEFINITION** (data evaluation: population, skill level, individual)

[Preatoni, 2007; Preatoni et al., in press]

1585 Marquette (MI) • 19–23 July 2010 • E. PREATONI 6

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

SKILLS MONITORING

MOTOR SKILL

The ability of obtaining the desired goal with a high degree of certainty and maximum proficiency. *[Schmidt & Lee, 2004; Newell K.M. and Ranganathan R., 2009]*

MULTIFACTORIAL MOTION ANALYSIS

```

graph TD
    Athlete[Athlete] --> Status[STATUS DEPICTION]
    Status --> Ref[REFERENCE DEFINITION]
    Ref --> Comp[comparison interpretation]
    Comp --> FB[FEED-BACK INFORMATION]
    FB --> Athlete
    Trainer[TRAINER (PHYSICIAN, ...)] --> Athlete
    Athlete --> Trainer
    
```

MAIN ISSUES

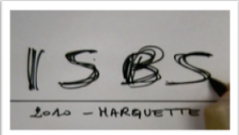

- ★ ROBUST DESCRIPTION (variability, exp.design, data reduction, ...)
- ★ REFERENCE DEFINITION (data evaluation: population, skill level, individual)
- ★ SUITABLE AIDS FOR TRAINING (“translation”) *[Preatoni, 2007; Preatoni et al., in press]*

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 7

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

MOVEMENT VARIABILITY (MV)

Variability is pervasive throughout the multiple levels of movement organization and occurs not only between but also within individuals *[Bartlett, 1997; Bartlett et al., 2007; Bates et al., 2004; Hatze, 1986; James, 2004; Newell et al., 2006; + many others!]*

ISSUES

- 1 HOW MUCH? HOW TO DEAL WITH?
- 2 WHY? WHAT IS IT? WHERE DOES IT COME FROM?
- 3 WHAT MAY IT MEAN? WHAT MAY IT BE RELATED TO?

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 8

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

RACE WALKING (RW)

DEFINITION (IAAF Handbook, Section 7, rule 230):

“RACE WALKING is a progression of steps so taken that the walker makes contact with the ground, so that no visible (to the human eye) loss of contact^o occurs.

The advancing leg shall be straightened^o (i.e. not bent at the knee) from the moment of first contact with the ground until the vertical upright position.”

WALKING

RUNNING

- ★ NO DOUBLE SUPPORT
- ★ “INBORN”

RACE WALKING

- 1 NO FLIGHT PHASE
- 2 NO KNEE FLEXION (supporting leg)
- 3 “FORCED”

WHY RW?

- ★ SPECIFIC BIOMECHANICAL and COORDINATIVE DEMANDS
- ★ HIGHLY TECHNICAL MOTOR TASK
- ★ APPARENTLY STEREOTYPED
- ★ MOST SIMILAR TO NORMAL WALKING

 Marquette (MI) • 19–23 July 2010 • E. PREATONI9

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

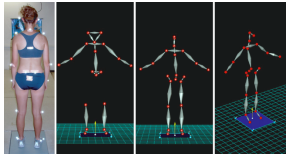

EXPERIMENTAL SETTINGS

POPULATION:

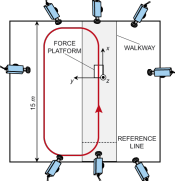

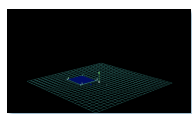

- ★ 7 (INTER)NATIONAL RACE WALKERS
(4M + 3F: 19.7±2.1 y; 1.75±0.10 m; 58.3±8.3 kg)
- ★ PB over 10 Km: 40'56" ÷ 48'34"
(→ 3.77±0.24 m/s)

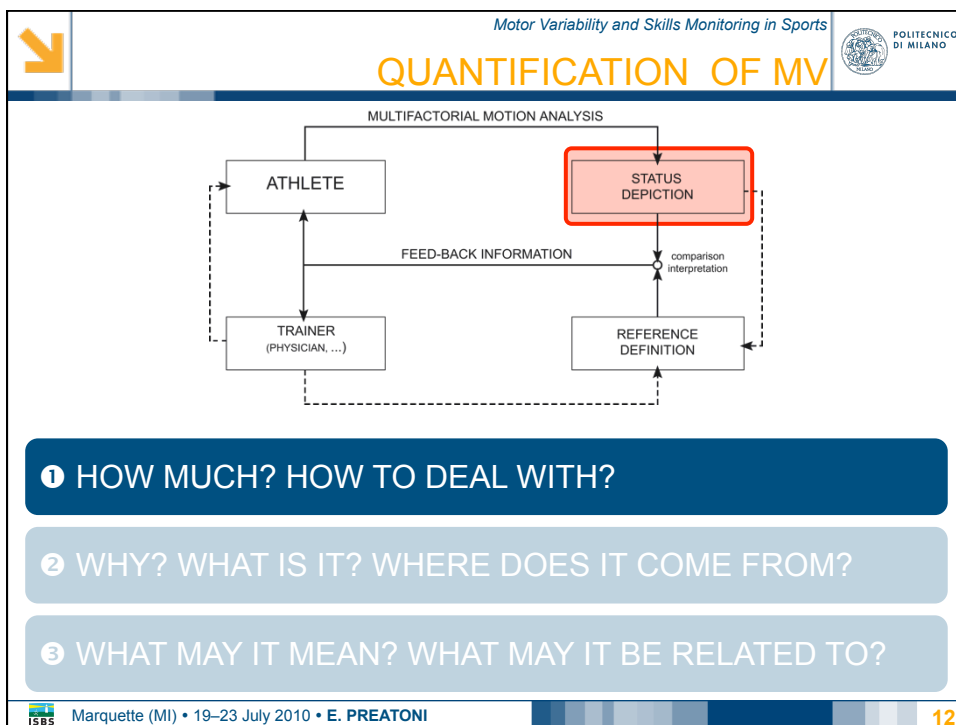

INSTRUMENTATION & EXPERIMENTAL DESIGN

- ★ 8 TVC optoelectronic sys. (ELITE – 100 Hz)
- ★ FORCE platform (AMTI – 500 Hz)
- ★ SAFLo marker set
- ★ 20 suitable trials (for each subject's side)
@ self-selected training pace
- ★ controls (trainer, velocity, GRF_{ap})
- ★ focus on kinematic/kinetic variables of lower limbs and pelvis

 Marquette (MI) • 19–23 July 2010 • E. PREATONI10

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

SAMPLE ENTROPY (*SampEn*)

$$SampEn(m; r) = \ln \left(\frac{C_m(r)}{C_{m+1}(r)} \right)$$

e.g.: $C_{1,m}$ ($m=3$ length of sequence)
(r = preset tolerance)

 Marquette (MI) • 19–23 July 2010 • E. PREATONI

25

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

SAMPLE ENTROPY (*SampEn*)

$$SampEn(m; r) = \ln \left(\frac{C_m(r)}{C_{m+1}(r)} \right)$$

e.g.: $C_{1,m+1}$ ($m+1=4$ length of sequence)
(r = preset tolerance)

- ★ *SampEn* measures the t-series REGULARITY [Richman & Moorman, 2000]
- ★ regularity has some relations with the complexity of the system generating the signal [Pincus, 1995]

SampEn = 0

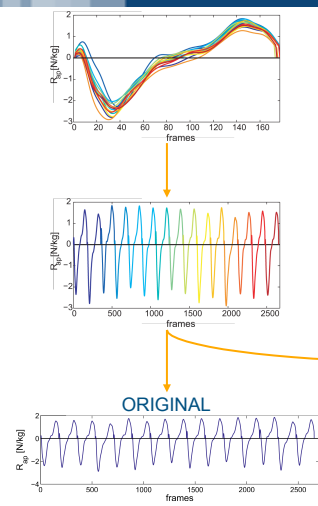

- ★ ↑ regularity, ↑ predictability
- ★ indicates loss of system complexity
- ★ may be a sign of anomalies [e.g. cardiovascular - Richman & Moorman, 2000]
- ★ ↓ regularity, ↓ predictability
- ★ indicates random behaviour

 Marquette (MI) • 19–23 July 2010 • E. PREATONI

26

Motor Variability and Skills Monitoring in Sports 

INFORMATIVE MV vs. NOISY MV

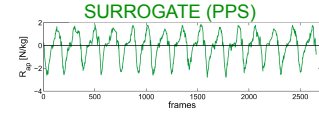

ORIGINAL

$SampEn = 0.235$
($m=1, r=0.1$)

- ★ extraction of stance phase
- ★ NO time normalisation!
- ★ t-series: continuous sequence of RW stance phases
- ★ entropy estimation (for each subj, var and side)

vs.

SURROGATE (PPS)

PPS: Pseudo Periodic Surrogate
[Small et al., 2001]

- ★ destroys nonlinear structure
- ★ preserves periodic features

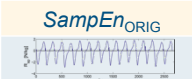

$SampEn = 0.476$
($m=1, r=0.1$)

 Marquette (MI) • 19–23 July 2010 • E. PREATONI27

Motor Variability and Skills Monitoring in Sports 

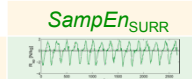

INFORMATIVE MV vs. NOISY MV

$SampEn_{ORIG}$

\gg

$SampEn_{SURR}$

MV_{tot}

MV_{ϵ}
(noise)

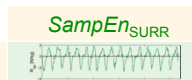

MV_m
(n-m-s intrinsic dynamics)

$SampEn_{ORIG}$

$<$

$SampEn_{SURR}$

MV_{tot}

MV_{ϵ}
(noise)

MV_m
(n-m-s intrinsic dynamics)

 Marquette (MI) • 19–23 July 2010 • E. PREATONI28

Motor Variability and Skills Monitoring in Sports

POLITECNICO DI MILANO

INFORMATIVE MV vs. NOISY MV

P always < .002
Cohen's *d* always > .80

- ★ low *SampEn* values for every considered variable (→RW very stereotyped!!)
- ★ *SampEn*_{ORIG} significantly lower than *SampEn*_{SURR} ($\Delta = 16\% - 59\%$)
- ★ MV may be functionally related to the n-m-s system organisation
- ★ increased regularity @ hip and ankle compared with knee
- ★ increased control to compensate unnatural knee flex-extension in RW

[Preatoni, 2007; Preatoni et al., in press]

1585 Marquette (MI) • 19–23 July 2010 • E. PREATONI 29

Motor Variability and Skills Monitoring in Sports

POLITECNICO DI MILANO

ADAPTATION & PROTOCOL VALIDITY

- ★ no changes of regularity throughout the testing session
- ★ likely no adaptation across trials
- ★ racewalkers acquainted with the testing procedures from the beginning
- ★ validity of the experimental design

[Preatoni, 2007; Preatoni et al., in press]

1585 Marquette (MI) • 19–23 July 2010 • E. PREATONI 30

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

MV & COORDINATION: DST APPROACH

★ MV may be functional... ...but how?

MOTOR COORDINATION

“[...] the problem of mastering the very many degrees of freedom involved in a particular movement [...]” *[Bernstein, 1967; Turvey, 1990]*

“[...] the process by which the degrees of freedom are organized in time and in sequence to produce a functional movement pattern.” *[Stergiou et al., 2001]*

“[...] the functional link between the muscles and joints used to produce the desired performance or outcome.” *[Payton & Bartlett, 2008]*

DYNAMIC SYSTEMS THEORY (DST) APPROACH

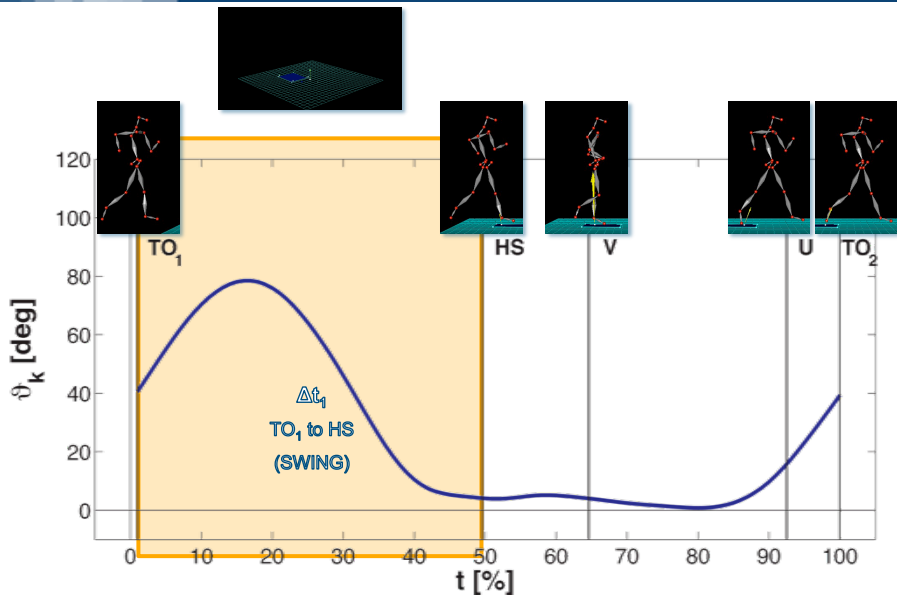

- ★ limbs as systems of coupled pendulums
- ★ observation of Continuous Relative Phase (CRP)
- ★ variability in phase relationships

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 31

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

FUNCTIONAL PHASES OF RW

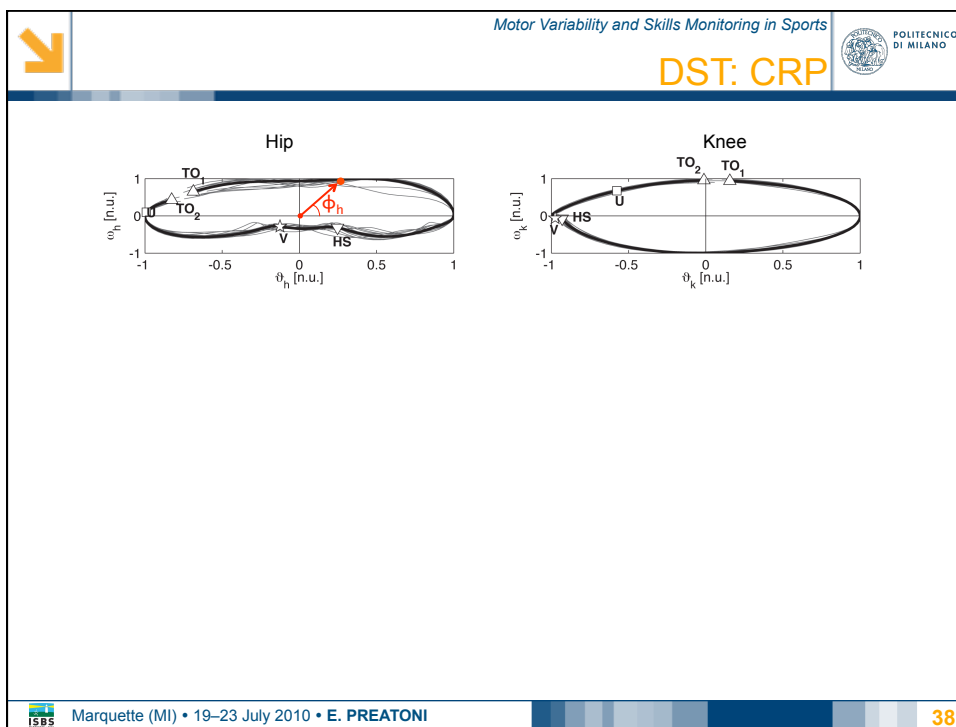

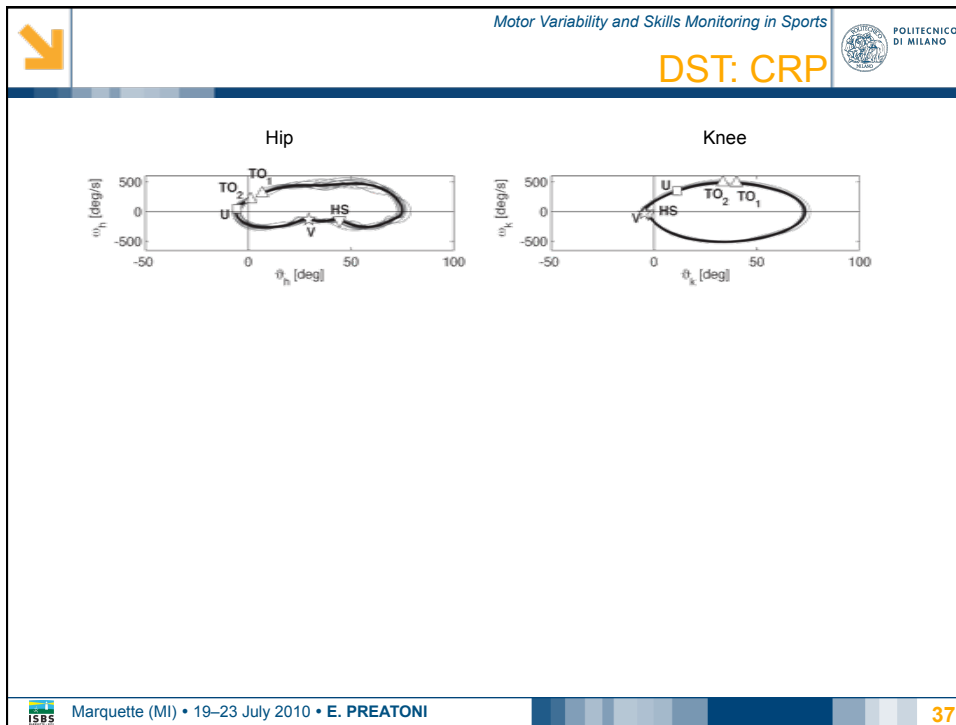

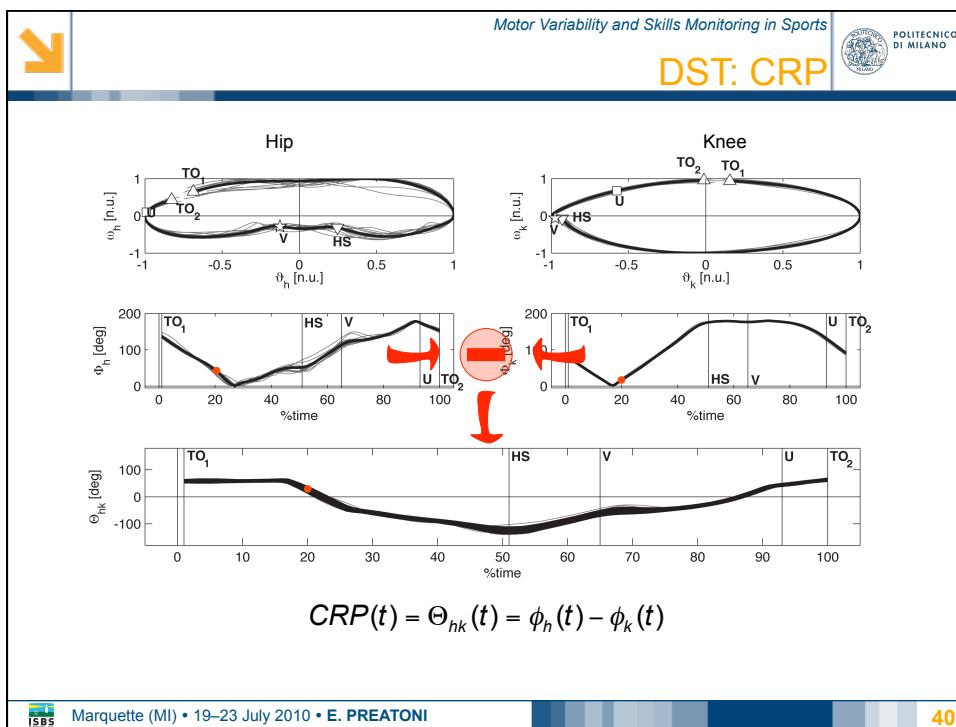

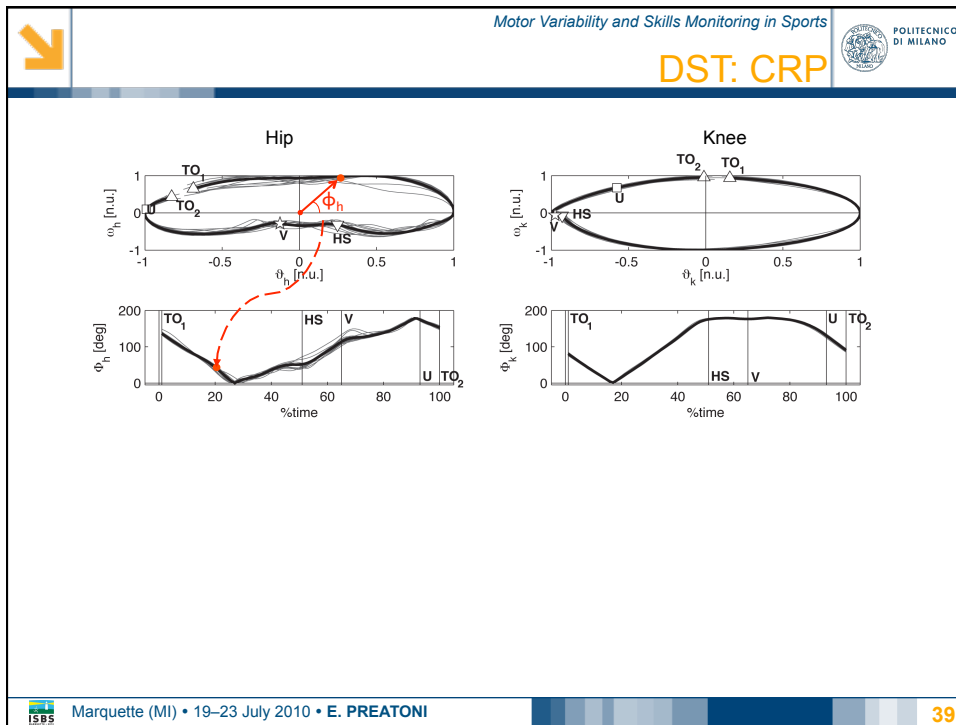

The graph plots knee angle θ_k [deg] on the y-axis (0 to 120) against time t [%] on the x-axis (0 to 100). A blue curve shows the knee angle over one cycle. Key events are marked with vertical lines: TO_1 at 0%, HS at 50%, V at approximately 65%, U at approximately 90%, and TO_2 at 100%. The area under the curve from TO_1 to HS is shaded yellow and labeled 'SWING'. A label Δt_1 indicates the duration of this phase. Above the graph, stick-figure illustrations show the runner's posture at TO_1 , HS , V , U , and TO_2 . A 3D grid is also visible at the top.

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 32

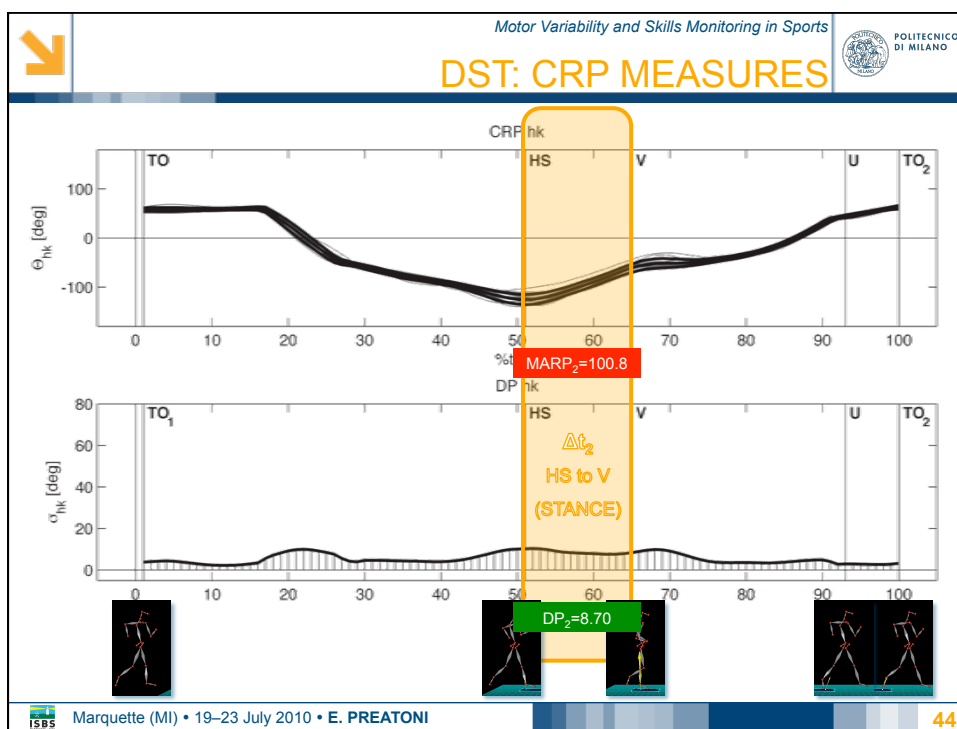

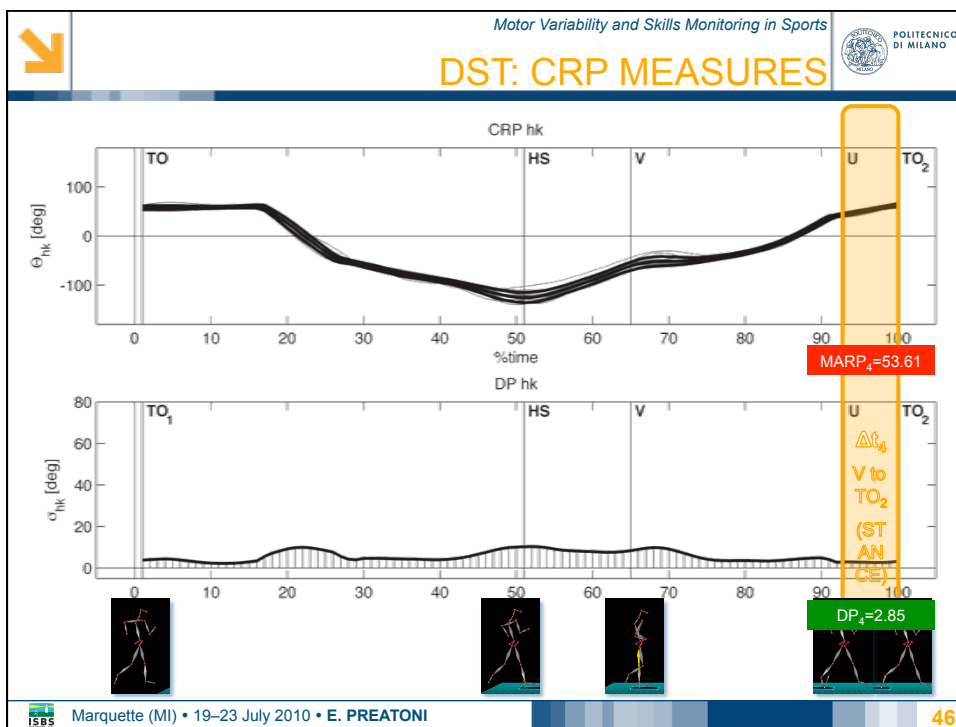

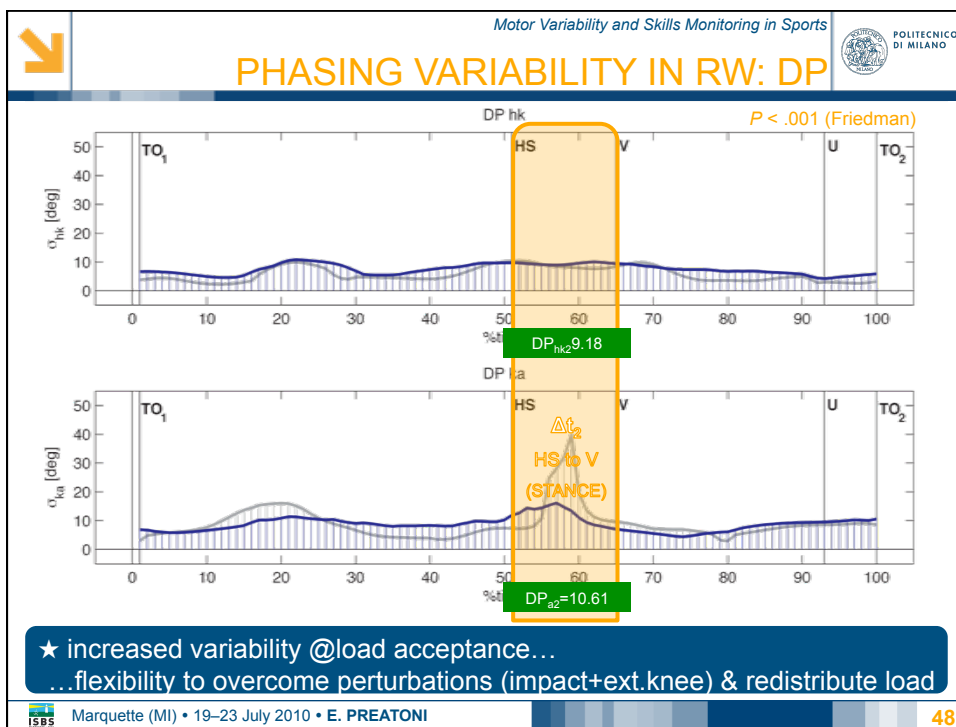

★ increased variability @load acceptance...
 ...flexibility to overcome perturbations (impact+ext.knee) & redistribute load

Motor Variability and Skills Monitoring in Sports

Motor Variability and Skills Monitoring in Sports

POLITECNICO DI MILANO

SKILL LEVEL and SampEn

POPULATION [7]

LESS SKILLED **LS**
(national rank) [4]

MORE SKILLED **MS**
(Europe elite) [3]

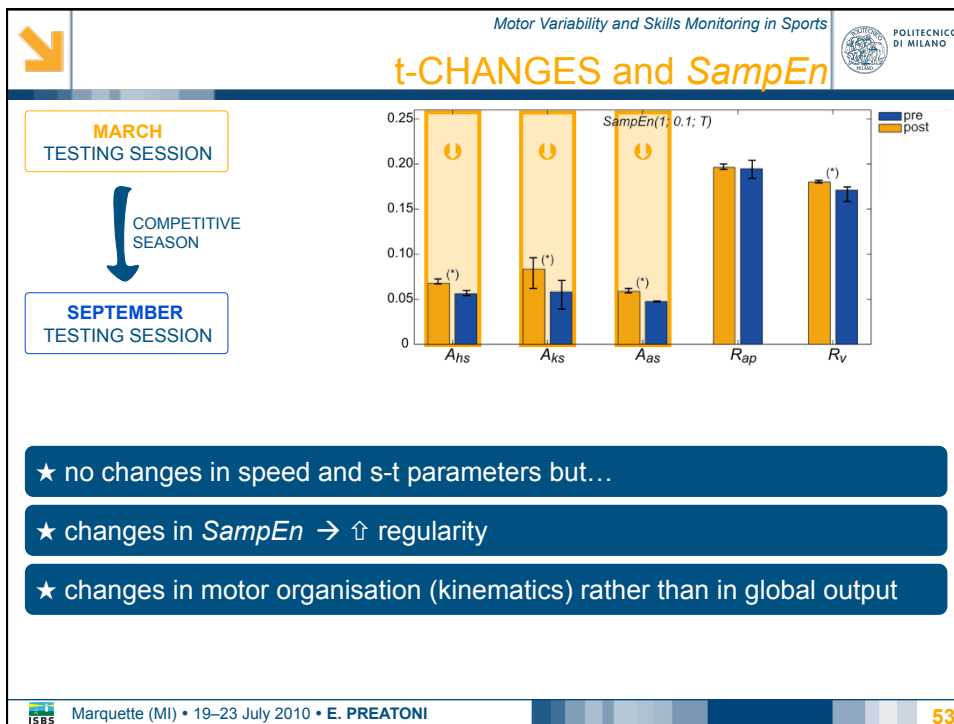

Joint	MS (white)	LS (black)
A_{ns}	~0.12	~0.07
A_{ks}	~0.13	~0.13
A_{bs}	~0.12	~0.06
R_{ap}	~0.19	~0.23
R_v	~0.21	~0.18

P always < .02 = Cohen's d always > 1.40

- ★ both MS and LS possessed mastery of the movement and...
...traditional analysis failed in discriminating
- ★ *SampEn* @ ankle and hip significantly lower in LS
- ★ LS need to add further control to compensate the locked knee
- ★ MS have a less rigid control over the body's degrees of freedom
- ★ confirmation by knee behaviour

RETURNING BIOMECH INFORMATION

...BUT FOR INNOVATIVE MEASURES??

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 63

Motor Variability and Skills Monitoring in Sports

 POLITECNICO DI MILANO

CONCLUSION and PERSPECTIVES

- ★ DUAL NATURE OF VARIABILITY
 - MV AS NOISE → NEED FOR FINDING THE ATHLETE'S SIGNATURE
 - MV AS INFO → NEED FOR UNDERSTANDING UNDERLYING FACTORS
- ★ NEED FOR PROPER EXPERIMENTAL DESIGNS AND DATA ANALYSES TECHNIQUES
- ★ POTENTIALITIES OF “INNOVATIVE METHODS”
- ★ NEED FOR REFERENCE DATABASES AND STANDARDS
- ★ NEED FOR FINDING RELATIONS BETWEEN CAUSES AND EFFECTS
 - INJURY PREVENTION
 - PERFORMANCE PREDICTION
- ★ NEED FOR PROPER FEEDBACK TO COACHES, ATHLETES, ...

 Marquette (MI) • 19–23 July 2010 • E. PREATONI 64

Motor Variability and Skills Monitoring in Sports

GUIDELINES

POLITECNICO DI MILANO

- ★ ROBUST DESCRIPTION
- ★ REFERENCE DEFINITION
- ★ QUANTITATIVE AIDS

```

    graph TD
      Athlete[Athlete] --> MFA[Multifactorial Motion Analysis]
      Trainer[Trainer (Physician...)] --> MFA
      MFA --> SD[Status Depiction]
      SD --> RD[Reference Definition]
      RD --> FE[Feedback Information]
      FE --> SD
      RD --> PE[Parameters Estimation]
      PE --> S[Summary through med & IQR (MAD)]
      PE --> QV[Quantification of Variability]
      QV --> DPT[Definition of Proper Number of Trials]
      DPT --> RUT[Rejection of Unrepresentative Trials]
      RUT --> N[Normalisation to median at / 100pt]
      RUT --> DS[Definition of I-Series and Surrogates]
      N --> DST[DST Analysis (AVA, CRP, MAV)]
      N --> CB[Confidence Bands (boot-C)]
      N --> NL[Non-linear Analysis of Variability]
      S --> CR[Comparison with Reference]
      DST --> CR
      CB --> CR
      NL --> CR
      CR --> IS[Interpretation and Synthesis]
      IS --> TA[Trainer Athlete]
  
```
